

The Dementia Enabling Environment Project offers a range of initiatives to translate research and guidelines into practice in the area of dementia and the built environment.

- Virtual Information Centre – providing a wide range of ideas, information and resources. The web based centre will include; an opportunity to ask an expert for design advice, showcase good design examples and download tools and information to help you create enabling environments for people living with dementia
- Workshops for families and professionals
- Comprehensive lending Library of information and resources through Alzheimer's Australia Libraries nationally
- Promotion of dementia design considerations within standards, universal design and recommended guidelines
- Development and promotion of dementia environment audit tools and resources
